

### Post-Insertion Instructions for Women

- Your insertion site has been covered with two layers of bandages. Remove the outer pressure bandage any time after 24 hours. It **must** be removed as soon as it gets wet. The inner layer is either waterproof foam tape or steri-strips. They should be removed in **3 days**.
- We recommend putting an ice pack on the insertion area a couple of times for about 20 minutes each time over the next 4 to 5 hours.
- Do not take tub baths or get into a hot tub or swimming pool for **3 days**. You may shower but do not scrub the site until the incision is well healed (about 7 days).
- No major exercises for the incision area for the next **3 days**, this includes running, elliptical, squats, lunges, etc.
- The sodium bicarbonate in the anesthetic may cause the site to swell for 1-3 days.
- The insertion site may be uncomfortable for up to 2 to 3 weeks. If there is itching or redness you may take Benadryl for relief, 50 mg. orally every 6 hours. Caution this can cause drowsiness!
- You may experience bruising, swelling, and/or redness of the insertion site which may last from a few days up to 2 to 3 weeks.
- You may notice some pinkish or bloody discoloration of the outer bandage. This is normal.
- If you experience bleeding from the incision, apply firm pressure for 5 minutes.
- Please call if you have any bleeding not relieved with pressure (not oozing), as this is NOT normal.
- Please call if you have any pus coming out of the insertion site, as this is NOT normal.

#### Reminders:

- Remember to go for your post-insertion blood work **6 weeks** after the insertion.
- Most women will need re-insertions of their pellets **3-4 months** after their initial insertion.
- Please call as soon as symptoms that were relieved from the pellets start to return to make an appointment for a re-insertion. The charge for the second visit will only be for the insertion and not a consultation.
